

Car Park Fixtures Cast In Bollards - Galvanised

Tactile Systems Australia range of Cast in Bollards are ideal for protecting both people and property.

Our bollards are available in a range of sizes and are manufactured to our high-quality standards and specifications.

All bollards are manufactured from high grade steel to give a long lasting robust finish.

These cast-in bollards are ideal for new construction use or can be retrofitted into existing substrates if necessary. Retrofit use will require a core hole to be made in the existing substrate.
