

## Fixings TSA Hammer Fixing

### Hammer-in stainless fixing and plug

The **Tactile Systems** range of hammer fixing are specially selected to suit push through installation.

When installed the plug expands to provide a secure fixing into the substrate material, as well as providing reliable fixing for the product being installed.

Hammer fix allows rapid and secure install times, especially in situations where numerous fixings are required.

The built in hammer stop lip works to prevent jams caused by premature expansion.

- 304 grade Stainless steel fixing
- Choice of 3 colour plugs to suit various applications
- Standard silver coloured fixings
- Black coated fixings available as stocked item
- Specially selected by Tactile Systems to suit Future-Tech panels and stair nosing
