Truck Wheel Stops - Rubber

Tactile Systems Truck Wheel stops are manufactured from vulcanised rubber to provide years of service in Australia's harsh climate, as well as providing improved strength and elasticity.

They feature reflective yellow markings for maximum visibility, moulded in fixing points for secure installation and chamfered edges to aid in water shedding.

Heavy duty construction with reinforced rib design provides additional structural integrity as well as improving impact resistance. Higher levels of material used in construction add to improved long term durability and operating life.
